GENERAL UTILIZATION AND COMMISSIONING DIRECTIONS

Always make reference to the specific description of the product and to the Manufacturer's instruction.
Carefully observe the following warnings.

Storage and Transportation

Must comply with the environmental conditions stated in the product's specification or by the applicable IEC standards.

Installation

Must be properly made and in compliance with the operational ambient conditions stated by the Manufacturer.

Electrical Connection

Must be made strictly according to the wiring diagram supplied with the Product, to its electrical characteristics and in compliance with the applicable standards particularly with reference to human safety.

Measuring Inputs and Power Supply

Carefully check that the value of input quantities and power supply voltage are proper and within the permissible variation limits.

Outputs Loading

Must be compatible with their declared performance.

Protection Earthing

When earthing is required, carefully check its effectiveness.

Setting and Calibration

Carefully check the proper setting of the different functions according to the configuration of the protected system, the safety regulations and the co-ordination with other equipment.

Safety Protection

Carefully check that all safety means are correctly mounted, apply proper seals where required and periodically check their integrity.

Handling

Notwithstanding the highest practicable protection means used in designing M.S. electronic circuits, the electronic components and semiconductor devices mounted on the modules can be seriously damaged by electrostatic voltage discharge which can be experienced when handling the modules.

The damage caused by electrostatic discharge may not be immediately apparent but the design reliability and the long life of the product will have been reduced. The electronic circuits produced by M.S. are completely safe from electrostatic discharge (8 kV IEC 255.22.2) when housed in their case; withdrawing the modules without proper cautions expose them to the risk of damage.

Maintenance

Make reference to the instruction manual of the Manufacturer; maintenance must be carried-out by specially trained people and in strict conformity with the safety regulations.

Waste Disposal of Electrical & Electronic Equipment

(Applicable throughout the European Union and other European countries with separate collection program). This product should not be treated as household waste when you wish dispose of it. Instead, it should be handed over to an applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequence to the environment and human health, which could otherwise be caused by inappropriate disposal of this product. The recycling of materials will help to conserve natural resource.

Fault Detection and Repair

Internal calibrations and components should not be altered or replaced.

For repair please ask the Manufacturer or its authorized Dealers.

Misapplication of the above warnings and instruction relieves the Manufacturer of any liability.

GENERAL

Input voltage are supplied to 4 Potential Transformers: three measuring phase-to-neutral voltage and one measuring the zero sequence voltage supplied by the secondary of three system P.Ts. Y/Open Delta connected.

The Measuring Ranges of the different inputs respectively are:

Phase Voltage : (0.01 - 2)Un
Neutral Voltage : (0.01 - 2)Un

Make electric connection in conformity with the diagram reported on relay's enclosure.

Check that input currents and voltages are same as reported on the diagram and on the test certificate.

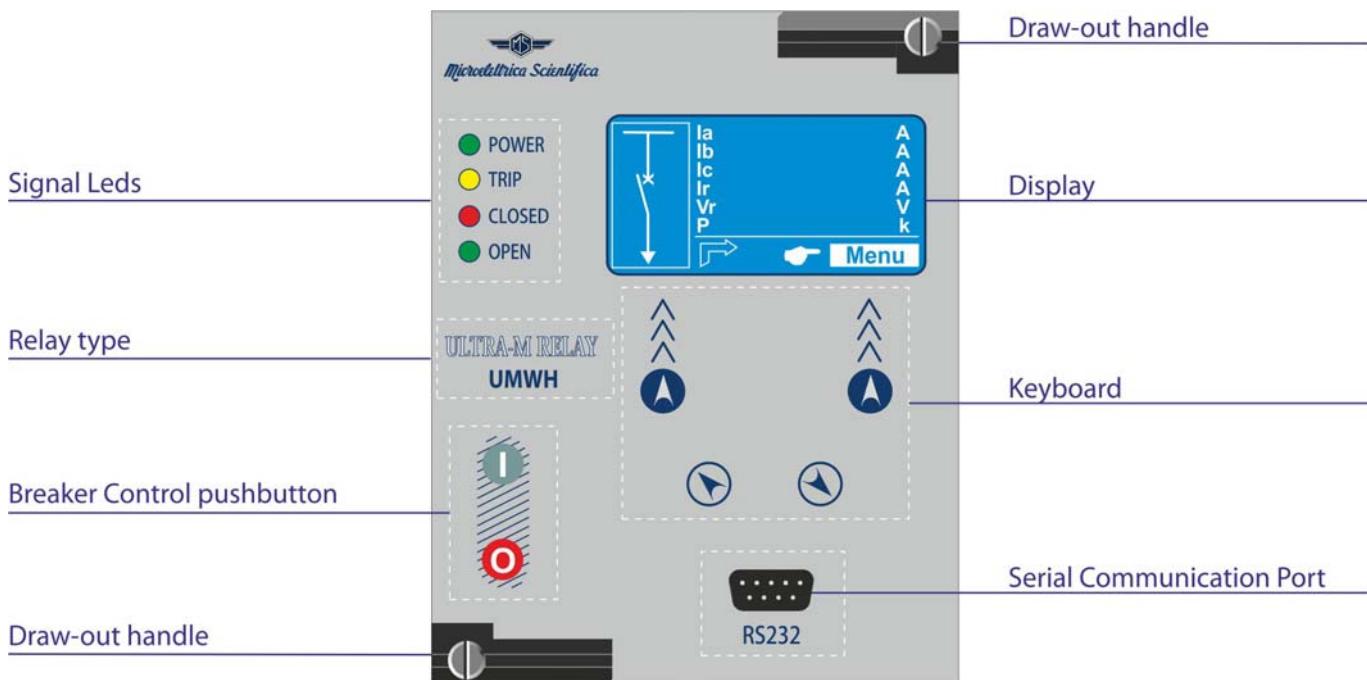

The auxiliary power is supplied by a built-in interchangeable module fully isolated and self protected.

Power Supply

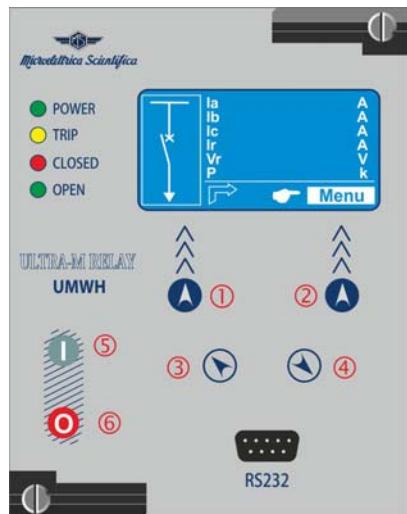

The relay can be fitted with two different types of **power supply**:

Type 1) - {	24V(-20%) / 110V(+15%) a.c.	Type 2) - {	80V(-20%) / 220V(+15%) a.c.
	24V(-20%) / 125V(+20%) d.c.		90V(-20%) / 250V(+20%) d.c.

Before energizing the unit check that supply voltage is within the allowed limits.

FRONT PANEL

KEYBOARD AND DISPLAY

Navigation menu

By these buttons the options showed in correspondence on the display are selected.

Increase

These buttons are used to scroll the items of the different menus (Local Control, Measurements, Energy metering etc.).

Decrease

Open

these buttons (when enabled) operate Circuit Breaker Open/Close control (see § C/B Mngn)

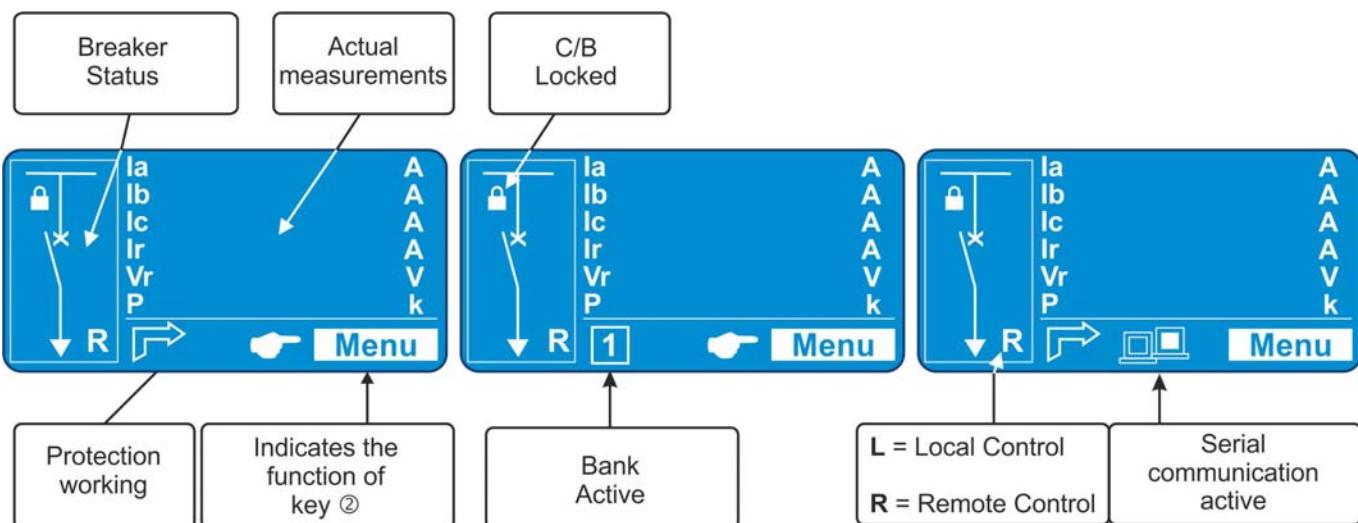

Close

- By the key ② select the windows showing the ICONS of the available menus.
- By the key ③, ④ select the desired icon and enter by key ①
- The different elements can be selected by the key ③ and ④.

The details of the individual menus are given in the following paragraphs.

Display

The 128x64 pixel LCD display the available information (menu, etc.).

ICONS OF DISPLAY

	LocalCmd	Local Commands
	Measure	Actual Measurements
	TripTrec	Trip Recording
	Counter	Partial Counters (Resettable Counter)
	Event	Event Recording
	Setting	Function Settings
	System	System Settings
	TimeDate	Time and Date
	Healthy	Diagnostic Information
	Info	Info Device

SIGNALIZATION

Four signal leds are provided:

Signalization Leds			
Green Led		<input type="checkbox"/> III <input type="checkbox"/> Flashing	- Internal Relay Fault
Yellow Led		<input type="checkbox"/> Off <input type="checkbox"/> Illuminated <input type="checkbox"/> Flashing	- No Trip - Trip occurred - Function Timing <small>Reset from Illuminated status is manual</small>
Red Led		<input type="checkbox"/> Off <input type="checkbox"/> Illuminated	- C/B Open - C/B Close
Green Led		<input type="checkbox"/> Off <input type="checkbox"/> Illuminated	Both Flashing Operation of Trip Circuit Supervision element.

- In case of auxiliary power supply failure the status of the leds is recorded and reproduced when power supply is restored.

Leds Manual Reset

For Leds' manual reset operate as follows:

- | | | | |
|--|---|--|---|
| | <ul style="list-style-type: none"> Press "Menu" for access to the main menu with icons. | | <ul style="list-style-type: none"> Select "LedClear". Press "Select" to execute the command. (See § Password). |
| | <ul style="list-style-type: none"> Select icon "Cmd". Press "Select". | | <ul style="list-style-type: none"> When command has been executed the display shows "! Command Done!"; |

Display of the last trip

Beside the signalization of the yellow led "Trip", indicating a generic function trip, the display shows a window indicating the last function that was tripped and the number of events that are stored in the memory. The display will show this window until the reset button or external reset are operated.

- | | |
|--|---|
| | <ul style="list-style-type: none"> Press "Menu" to access to the main menu with icons. Press "Res." to erase visualization. Ex. "t1l>" (flashing) is the last trip. |
|--|---|

CMD (LOCAL COMMAND)

"**Cmd**" allow to operate from relay front face controls like Thermal Memory reset, Leds reset, etc.

Menu	Description	Password
→ Led	Clear	Reset of signal Leds
→ Relays	Clear	Manual reset of output relays
→ Breaker	Close	Manual C/B closing <i>(conditioned by Password)</i>
→ Breaker	Open	Manual C/B opening <i>(conditioned by Password)</i>
→ Event	Clear	Reset of all Events recorded
→ HistFail	Clear	Reset of Internal Failure Historic records
→ Leds	Test	Signal Leds test

To operate one command by the Front Face Keyboard, proceed as follows (Led Reset in the present example).

- 1  • Press "**Menu**" for access to the main menu with icons.
- 2  • Select "**Cmd**" icon with pushbutton "**Increase**" or "**Decrease**".
• Press "**Select**" for access.
- 3  • Select with pushbutton "**Increase**" or "**Decrease**" the menu "**LedClear**".
• Press "**Select**" to execute the command.
(if Password is request, see § Password).
- 4  • When command has been executed the display shows "**! Command Done!**"; go to "3".

MEASURE

Real time values as measured during the normal operation.

- | | |
|---|--|
| 1
 | <ul style="list-style-type: none"> Press "Menu" for access to the main menu with icons. |
| 2
 | <ul style="list-style-type: none"> Select "Measure" icon with pushbutton "Increase" or "Decrease". Press "Select" for access. |
| 3
 | <ul style="list-style-type: none"> Scroll the menu "Measure" with pushbutton "Increase" or "Decrease" to display the measurement. Press "Exit" to go to the main menu. |

→ Ia (0 ÷ 999999)	A	Phase A current	(R.M.S. ampere)
→ Ib (0 ÷ 999999)	A	Phase B current	(R.M.S. ampere)
→ Ic (0 ÷ 999999)	A	Phase C current	(R.M.S. ampere)
→ Ir (0 ÷ 999999)	A	Residual Current filter + Harm	
→ Vr (0 ÷ 999999)	V	Residual Voltage filter + Harm	
→ P (0 ÷ 999999)	kW	Active Power	
→ Q (0 ÷ 999999)	kVar	Reactive Power	
→ S (0 ÷ 999999)	kVA	Apparent Power	
→ Pm (0 ÷ 999999)	kW	3 period average Active Power	

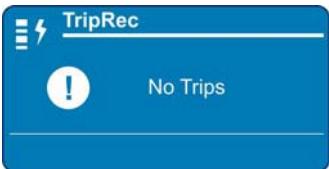

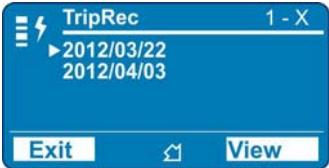

TRIP RECORDING (TRIPREC)

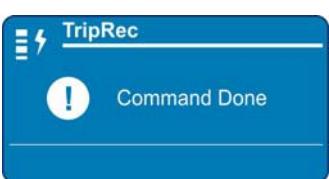

Display of the function which caused the tripping of the relay plus values of the measurement at the moment of tripping. The last 10 events are recorded.

The memory buffer is refreshed at each new relay tripping (FIFO logic).

Display → Reading of recorded Trips.

Erase → Clear all Trip recorded.

- 1  • Press "**Menu**" for access to the main menu with icons.
- 2  • Select "**LTrip**" icon with pushbutton "**Increase**" or "**Decrease**".
• Press "**Select**" for access.
- 3  • Select "**Display**" with pushbutton "**Increase**" or "**Decrease**".
• Press "**Select**" for access.
• For "**Erase**" go to "8"
- 4  • If no trip is recorded the display shows "**! No Trips**".
- 5  • If any trip was recorded, select "**View**" to display the chronological list of the records.
• By the keys "**Increase**" or "**Decrease**" select the date of the record to be checked.
- 6  • Will be shown:
"Descr" the function that caused the event (Example: t1I> = Trip)
"Edge" if the function was tripped (Rise) or reset (Fall)
"Date", date of trip, year/month/day, hour:minutes:seconds:milliseconds
• Press "**Value**", for reading the value of input quantities on tripping.

- 7** 
- Scroll with pushbuttons “**Increase**” or “**Decrease**” the available measurements.
 - Select “**Exit**” to go back to “5” for another selection, or “2” go back to the main menu.
- 8** 
- Select “**Erase**” with button “**Decrease**”.
 - Press “**Select**” to execute the commands; **All** Trips recorded are erased.
(if Password is request, see § Password).
- 9** 
- When command has been executed the display shows “**! Command Done**”;
 - Press “**Exit**” to go back to the main menu.

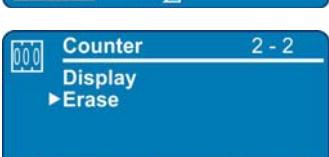

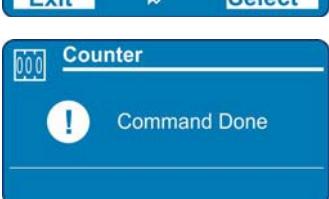

Date	<i>Date</i> : Year/Month/Day	
→	<i>Time</i> : hours/minutes/second/hundredths of seconds	
→ Cause	Indication of the protection function which caused the relay tripping.	
→ Ia	Phase A current	A
→ Ib	Phase B current	A
→ Ic	Phase C current	A
→ Ir	Residual Current filter	A
→ Vr	Residual Voltage filter	V
→ P	Active Power	kW
→ Q	Reactive Power	kVAr
→ S	Apparent Power	kVA
→ Pm	3 period average Active Power	kW

COUNTERS

Counters of the number of operations for each of the relay functions.

By the interface program "MSCom2" it is possible to individually reset the counters and set an initial starting number.

Display	→	AVT	0	Operations counters	Timed forward fault
	→	AnVr	0	Operations counters	Fault Vr
	→	51.1	0	Operations counters	<i>First</i> overcurrent element
	→	51.2	0	Operations counters	<i>Second</i> overcurrent element
	→	51.3	0	Operations counters	<i>Third</i> overcurrent element
	→	50.1	0	Operations counters	<i>First</i> short circuit overcurrent element
	→	50.2	0	Operations counters	<i>Second</i> short circuit overcurrent element
	→	50.3	0	Operations counters	<i>Third</i> short circuit overcurrent element
	→	51N.1	0	Operations counters	<i>First</i> time delay earth fault element
	→	51N.2	0	Operations counters	<i>Second</i> time delay earth fault element
	→	51N.3	0	Operations counters	<i>Third</i> time delay earth fault element
	→	50N.1	0	Operations counters	<i>First</i> instantaneous earth fault element
	→	50N.2	0	Operations counters	<i>Second</i> instantaneous earth fault element
	→	50N.3	0	Operations counters	<i>Third</i> instantaneous earth fault element
	→	IRF	0	Operations counters	Internal Relay Fault
	→	Aut Op	0	Operations counters	Automatic C/B Openings
	→	Aut CL	0	Operations counters	Automatic C/B Closings
	→	Man Op	0	Operations counters	Manual C/B Openings
	→	Man CL	0	Operations counters	Manual C/B Closings
	→	OvrOp	0	Operations counters	Overall C/B Openings total (Man+Aut)
	→	OvrCL	0	Operations counters	Overall C/B Closings total (Man+Aut)
	→	BrkF	0	Operations counters	Breaker failure to open
Erase	→	Reset all Counters (By the interface program "MSCom 2" it is possible to individually reset the counters and set an initial starting number)			

- 1  • Press "**Menu**" for access to the main menu with icons.
- 2  • Press "**Counter**" for access.
- 3  • Press "**Display**" for access.
- 4  • Display of the number of operations of each individual function.
 • With pushbuttons "**Increase**" or "**Decrease**" scroll the parameters
 • Press "**Exit**" go back to "3".
- 5  • Select "**Erase**" with pushbutton "**Decrease**".
 • Press "**Select**".
 (If Password is request, see § Password).
- 6  • When command has been executed the display shows "**! Command Done**";
 and return to "5".
 • With pushbutton "**Exit**" to go back to the main menu.

EVENTS (RECORDER CHRONOLOGIC EVENTS)

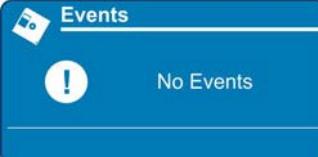

Display of the function which caused any of the following events: - *Status change of digital Inputs/Outputs.* - *Start of protection functions* – *Trip of protection function* – *Function reset*.

The last 100 events are recorded.

The memory buffer is updated at each new event.

Display → Reading events recorded.

Erase → Clear all events recorded.

- 1  • Press “**Menu**” for access to the main menu with icons.
- 2  • Select “**Events**” icon with pushbutton “**Increase**” or “**Decrease**”.
• Press “**Select**” for access.
- 3  • Select “**Display**” with pushbutton “**Increase**” or “**Decrease**”.
• Press “**Select**” for access.
• For “**Erase**” go to “7”
- 4  • If no event is recorded the display shows message “**! No Events**”.
- 5  • If any event was recorded, select “**View**” to display the chronological list of the records.
• By the keys “**Increase**” or “**Decrease**” select the date of the record to be checked.
- 6  • Will be shown:
“**Descr**” the function that caused the event
(Example: 1I> = Start, t1I> = Trip)
“**Edge**” if the function was tripped (Rise) or reset (Fall)
“**Date**”, date of trip, year/month/day, hour:minutes:seconds:milliseconds
- 7  • Select “**Erase**” with button “**Decrease**”.
• Press “**Select**” to execute the commands; **All** Events recorded are erased.
(if Password is request, see § Password).
- 8  • When command has been execute the display shows “**! Command Done**”;
• Press “**Exit**” to go back to the main menu.

SYSTEM (SYSTEM PARAMETERS)

Setting of system parameters.

CT&PTs	Phase CT	Prim.	→	1000	A	(1 ÷ 9999)	step	1	A	(1)
		Sec.	→	1	A	(1 / 5)				
	PT (Ph-Ph)	Prim.	→	10.00	kV	(0.10 ÷ 500.00)	step	0.01	kV	(2)(3)
		Sec.	→	100	V	(50 ÷ 150)	step	1	V	
	Neut. CT	Prim.	→	1000	A	(1 ÷ 9999)		1	A	(1)
		Sec.	→	1	A	(1 / 5)				
Nom. Val. (System Rated Values)	→	Freq.	50	Hz						
	→	In	500	A	(1 ÷ 9999)		1	A		
	→	Un	10.00	kV	(0.10 ÷ 500.00)		0.01	kV		
Setup Group	→	Group	1			(1 / 2)				

- Fn** : Nominal Frequency
- In** : Nominal Current
- Un** : Nominal Voltage
- Group** : Setting group active

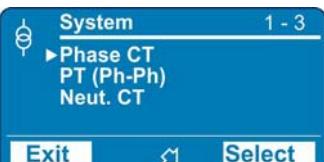

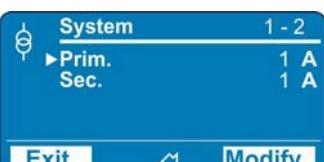

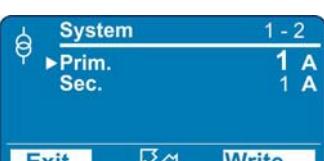

(1) Move the switch in the corresponding founding to the required input current as herebelow shorted.

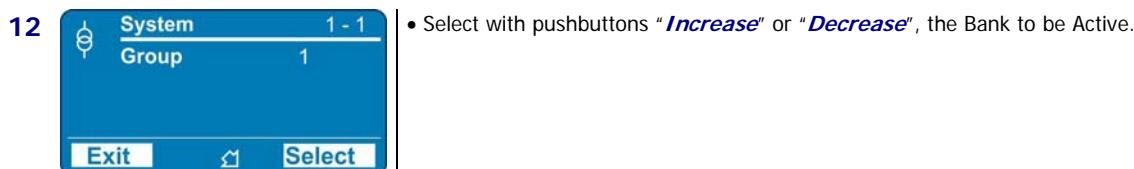

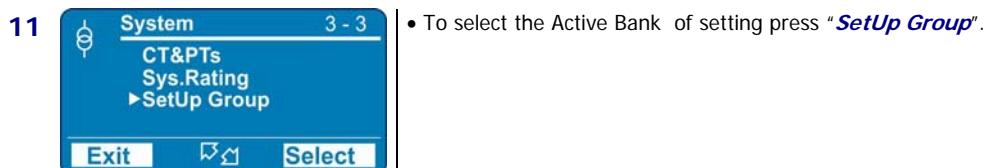

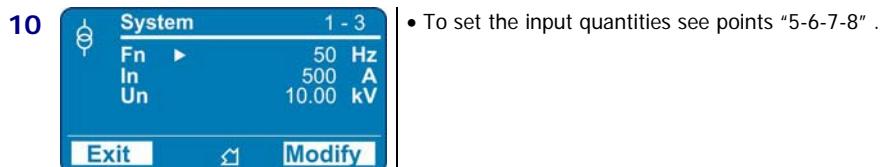

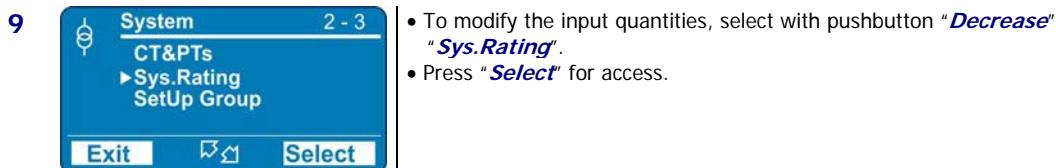

(2) Set the value of the phase-to-phase PT voltage.

Example: Example : TV $\frac{10000 : \sqrt{3}}{100 : \sqrt{3}}$ → set $\frac{\text{Prim.} = 10000}{\text{Sec.} = 100}$

(3) Zero sequence voltage input is to be supplied by three system P.Ts. Y/Open Delta connected; the open delta connected secondary are rated 1/3 of the phase-to-phase secondary voltage (Example: 10000 / 100: $\sqrt{3}$ / 100:3).

- 1** 
- Press "**Menu**" for access to the main menu with icons.
- 2** 
- Select "**Sys**" icon with pushbuttons "**Increase**" or "**Decrease**".
 - Press "**Select**" for access.
- 3** 
- Select "**CT&PTs**".
 - Press "**Select**" for access.
- 4** 
- Select "**Phase CT**".
 - Press "**Select**" for access.
- 5** 
- Select "**Prim.**" to modify the primary value of Phase CT, or press "**Decrease**" and select "**Sec.**" to modify the secondary value of Phase CT.
 - Press "**Modify**" to modify the parameter.
(if Password is request, see § Password).
- 6** 
- The value appear as bold figure.
 - Use pushbuttons "**Increase**" or "**Decrease**" to set the value.
 - Press "**Write**" to confirm the value
- 7** 
- The value is now set.
 - To set a new value return to the point "5".
 - Press "**Exit**".
- 8** 
- The display show "**Confirm the change?**".
 - Choose "**Yes**" to convalidate the changes.
 - Choose "**No**" to not confirm the changes.
 - After set confirmation (or non confirmation) the display goes back to point "4".

SETTINGS

Two complete Group of settings of the programmable variables are available in the "**SETTING**" menu.
Both "**Group #1**" and "**Group #2**" include the hereunder listed variables.

- 1 
-  Indicates the Setting Group that is actually being modified.
-  This symbol indicates that the function is enabled; symbol missing indicates that the function is disabled.

→ Comm.	Serial communication parameters
→ HMI	Visualization parameters
→ DNP-DPP	Detection module
→ AVAL/AMONT	Signal Forward/Reverse fault elaboration module
→ Inhib.I	Internal inhibition
→ Inhib.E	External inhibition
→ AnVr	Fault Vr
→ 51.1	<i>First</i> overcurrent element
→ 51.2	<i>Second</i> overcurrent element
→ 51.3	<i>Third</i> overcurrent element
→ 50.1	<i>First</i> short circuit overcurrent element
→ 50.2	<i>Second</i> short circuit overcurrent element
→ 50.3	<i>Third</i> short circuit overcurrent element
→ 51N.1	<i>First</i> time delay earth fault element
→ 51N.2	<i>Second</i> time delay earth fault element
→ 51N.3	<i>Third</i> time delay earth fault element
→ 50N.1	<i>First</i> instantaneous earth fault element
→ 50N.2	<i>Second</i> instantaneous earth fault element
→ 50N.3	<i>Third</i> instantaneous earth fault element
→ ExtReset	Configuration for external reset input
→ IRF	Internal Relay Fault
→ CB Mngr	C/B command Local / Remote setting
→ Oscillo	Setting variables for Oscillographic recording
→ BrkFail	Setting variables for Breaker Failure detection

Modifying the setting of variables

To modify any variable setting by the keyboard proceed as follows:

(example: change setting of element "51.1", from "Is 4.000 In" to "Is 3.500 In")

- | | | | |
|---|--|--|--|
|  | <ul style="list-style-type: none"> Press "Menu" for access to the main menu with icons. |  | <ul style="list-style-type: none"> The value appear as bold figure. |
|  | <ul style="list-style-type: none"> Select icon "Setting" by pushbuttons "Increase" or "Decrease". Press "Select". |  | <ul style="list-style-type: none"> Set new values pushbuttons "Increase" or "Decrease" buttons Press "Write". |
|  | <ul style="list-style-type: none"> Select by pushbuttons "Increase" or "Decrease" the parameter "51.1". Press "Select". |  | <ul style="list-style-type: none"> If the change of parameters is completed, press "Exit". |
|  | <ul style="list-style-type: none"> Select by buttons "Increase" or "Decrease" the menu "Oper.Levels". Press "Select". |  | <ul style="list-style-type: none"> "Yes" confirm all changes. "No" voids all the changes. |

Password

The password is requested any time the user wishes to modify any password protected parameter (example "51.1" menu "Setting").

The factory default password is "1111".

The password is only modifiable with "MSCom 2" software (see Manual "MSCom 2").

When password is requested, proceed as follows:

- | | | | |
|---|--|--|---|
|  | <ul style="list-style-type: none"> • Use the key "Increase" and "Decrease" and set the first digit of password. |  | <ul style="list-style-type: none"> • Use the key "Increase" or "Decrease" to set the third digit. |
|  | <ul style="list-style-type: none"> • Press "Next" to validate and go to the next digit. |  | <ul style="list-style-type: none"> • Press "Next" to validate and go to the next digit. |
|  | <ul style="list-style-type: none"> • Use the key "Increase" or "Decrease" to set second digit. |  | <ul style="list-style-type: none"> • Use the key "Increase" or "Decrease" to set the fourth digit. |
|  | <ul style="list-style-type: none"> • Press "Next" to validate and go to the next digit. |  | <ul style="list-style-type: none"> • Press "Next" to validate and go to modify the next parameter. |

By key "**Prev**" go back to previous digit.

The password validity expires 60 sec after the last setting modification or as soon as you go back to the main menu

Menu: Comm. (Communication parameters)

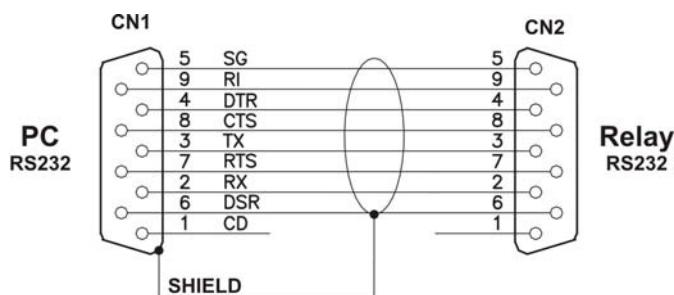

Options	→ BRLoc	38400	[9600 / 19200 / 38400 / 57600]
	→ BRRem	19200	[9600 / 19200 / 38400]
Node Address	→ Indir.	1	[1 ÷ 255]

Description of variables

- BRLoc** : RS232 local (Front Panel) serial communication speed
- BRRem** : RS485 remote (Rear terminal block) serial communication speed
- Indir.** : Identification number for the connection on serial communication bus

Front Panel serial communication port (RS232)

A D-Sub, pin female socket is available on Relay's front face for connection to the local RS232 serial communication line. Through this port - and by the interface program available from Microelettrica Scientifica S.p.A. (MSCom 2 for Windows XP/7) – it is possible to connect a Personal Computer to download all available information, operate any control and program the relay; the protocol used is "Modbus RTU".

Cable for direct connection of Relay to Personal Computer

Main serial communication port (RS485)

From the Relay's back terminal board, a RS485 ports is available for communication with SCADA system with Protocol Modbus RTU or IEC60870-5-103 (selectable).

The communication interface allows to program all settings, operate all commands and download all information and records.

The physical connection can be via a normal pair of wires (RS485) or, on request, via fiber optic.

Menu: HMI

Options	→ Lang	English
	→ Light	Autom.
	→ Menu	Standard

[English / Loc.Lang]

[Autom. / On]

[Standard / Extended]

Description of variables

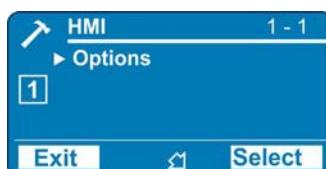

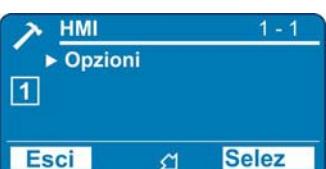

- **Lang** : Set Language
- **Light** : Set Display backlight
- **Menu** : Set Descriptions
 - Extended* = complete
 - Standard* = short

This menu allows to customize the Language and the Display's backlight.

The standard languages are English and Italian. On request, other languages can be loaded (French, German, etc..).

The Display backlight can be programmed always on "ON" or switched-on "Automatically" for a few second at any operation of the keyboard "Auto".

Example: set Local Language.

	→ TMDP	0.2	s	[0.1 ÷ 10]		0.05	s

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)
- Sw** : Power threshold
- α** : Sw constructor factor adjust
- TMDN** : DPNM hold time
- TMDP** : DPPM hold time

Function: AVAL/AMONT (Signal Forward/Reverse fault elaboration module)

Status	→ Enab.	No	[No / Yes]				
Timers	→ TAV	0.4	s	[0.1 ÷ 10]	step	0.01	s

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)
- TAV** : AVT hold time, timed forward fault

Function: Inhib.I (Internal Inhibition)

Status	→ Enab.	No	[No / Yes]				
Oper.Levels	→ SVr	0.120	Vn	[0.01 ÷ 1]	step	0.01	Vn
Timers	→ TMI	0.55	s	[0.1 ÷ 10]	step	0.01	s

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)
- SVr** : Internal Inhibition Vr level
- TMI** : IIM hold time

Function: Inhib.E (External Inhibition)

Status	→ Enab.	No	[No / Yes]				
---------------	----------------	----	------------	--	--	--	--

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)

Function: AnVr (Fault Vr)

Status	→ Enab.	No	[No / Yes]				
Oper.Levels	→ AnVr	1	Vn	[0.1 ÷ 1]	step	0.1	Vn

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
 □ **AnVr** : Anomaly Vrr level

Function: 51.1 (First Overcurrent Element)

Status	→ Enab.	No	[No / Yes]				
Options	→ tBI	Off	[Off / 2tBO]				
Oper. Levels	→ Is	4	In	(0.1 ÷ 4)	step	0.01	In
Timers	→ ts	100	s	(0.02 ÷ 100)	step	0.01	s
	→ tBO	0.75	s	(0.05 ÷ 0.75)	step	0.01	s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
 □ **tBI** : Blocking input reset time
Off = Permanent block
2tBO = Set 2xtBO.
 □ **Is** : Minimum operation level
 □ **ts** : Trip time delay
 □ **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Blocking Logic (BO-BI)

For each Protection Function it is possible to activate a Blocking Logic allowing for inhibiting their operation by external signals supplied to the Digital Input.

Output Blocking signal "BO"

All the protection functions that can be programmed to operate in the blocking logic mode, element, have an instantaneous element (beside the time delayed) which is operated as soon as the controlled quantity exceeds the set trip level ($I > [Is]$ for current, etc...) and is instantaneously reset when the input quantity drops below the reset level (normally 0.95Is).

The instantaneous element can control one of the user programmable output relays that, by its contacts, makes the signal available for blocking an external element (BO = Blocking Output).

In case, "tBO" sec after the set trip time "ts" has expired, the Protection function is still in operation (current above trip level), the Blocking Output relay (instantaneous element) is anyhow reset to eventually remove the Blocking signal from a back-up protection.

Blocking Input "BI"

For all the functions controllable by the Blocking Logic, it is possible to inhibit the time delayed tripping by an external signal that activates a Digital Input programmed for this functionality.

The programmed Digital Input gets activated by an external cold contact closing across its terminals.
With the variable "tBI" set to "OFF" (tBI=OFF), the tripping of the delayed function is blocked as long as the Blocking Input signal is present at the terminals of the Digital Input.

With the variable "tBI" set to "2xtBI" (tBI=2xtBI), 2xtBI seconds after the set trip time delay of the function has expired the blocking input is anyhow ignored and the function enabled to trip.

Automatic doubling of Overcurrent thresholds on current inrush

For some of the phase Overcurrent functions it is possible to have the set trip level [Is] automatically doubled when strong inrush current is detected.

If at circuit Breaker switch-on (i.e. when the input current rises from zero to a minimum measurable value) the current increases from 0 to 1.5 times the rated value [In] in less than 60ms, the set minimum pick-up level [Is] is dynamically doubled ([Is]→[2Is]) and keeps this value until the input current drops below 1.25xIn or the set time [t2xI] has elapsed.

This functionality is very useful to avoid spurious tripping of the instantaneous, or short-time delayed Overcurrent elements, that could be experienced at switch-on of reactive loads like Transformer or Capacitors.

Function: 51.2 (Second Overcurrent Element)

Status	→	Enab.	No	[No / Yes]
Options	→	tBI	Off	[Off / 2tBO]
Oper. Levels	→	Is	4	In (0.1 ÷ 4) step 0.01 In
Timers	→	ts	100	s (0.02 ÷ 100) step 0.01 s
	→	tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 51.3 (Third Overcurrent Element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	4	In (0.1 ÷ 4) step 0.01 In
Timers	→ ts	100	s (0.02 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)
- tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- Is** : Minimum operation level
- ts** : Trip time delay
- tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 50.1 (First short circuit overcurrent element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	20	In (0.1 ÷ 20) step 0.01 In
Timers	→ ts	100	s (0.02 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)
- tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- Is** : Minimum operation level
- ts** : Trip time delay
- tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 50.2 (Second short circuit overcurrent element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	20	In (0.1 ÷ 20) step 0.01 In
Timers	→ ts	100	s (0.02 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 50.3 (Third short circuit overcurrent element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	20	In (0.1 ÷ 20) step 0.01 In
Timers	→ ts	100	s (0.02 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 51N.1 (First time delay earth fault element Overcurrent Element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	1	On (0.005 ÷ 1) step 0.001 On
Timers	→ ts	100	s (0.1 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 51N.2 (Second time delay earth fault element Overcurrent Element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	1	On (0.005 ÷ 1) step 0.001 On
Timers	→ ts	100	s (0.1 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 51N.3 (Third time delay earth fault element Overcurrent Element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	1	On (0.005 ÷ 1) step 0.001 On
Timers	→ ts	100	s (0.1 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 50N.1 (First instantaneous overcurrent element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	3	On (0.005 ÷ 3) step 0.001 On
Timers	→ ts	100	s (0.1 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 50N.2 (Second instantaneous overcurrent element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	3	On (0.005 ÷ 3) step 0.001 On
Timers	→ ts	100	s (0.1 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: 50N.3 (Third instantaneous overcurrent element)

Status	→ Enab.	No	[No / Yes]
Options	→ tBI	Off	[Off / 2tBO]
Oper. Levels	→ Is	3	On (0.005 ÷ 3) step 0.001 On
Timers	→ ts	100	s (0.1 ÷ 100) step 0.01 s
	→ tBO	0.75	s (0.05 ÷ 0.75) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tBI** : Blocking input reset time
 - Off* = Permanent block
 - 2tBO* = Set 2xtBO.
- **Is** : Minimum operation level
- **ts** : Trip time delay
- **tBO** : Time to reset of the Blocking Output after expiring of the Trip time delay. "tBO" is also the trip time delay of the Breaker Failure function.

Function: ExtReset (External Reset Configuration)

This menu allows to configurate the edge polarity of the digital input associated to the trip reset function.

Options	→	ActOn	RiseEdge	[RiseEdge / FallEdge]
----------------	---	--------------	----------	-----------------------

Description of variables

- **ActOn** : RiseEdge Active on Rise Edge (Digital Input close).
FallEdge Active on Fall Edge (Digital Input open).

Function: IRF (Internal Relay Fault)

In this menu it is possible to configurate the operation of the Relay Internal Fault detection element

Timers	→	tIRF	5.00	s (5÷200)	step 0.01 s
---------------	---	-------------	------	-----------	-------------

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **tIRF** : Trip time delay

Operation

Tripping of the function operates a user programmable output relay.

Function: Oscillo (Oscillographic Recording)

Status	→ Enab.	No	[No / Yes]
Options	→ Trig	Start	[Start / Trip / OnCmd / REUserLg / REUserLg]
Timers	→ tPre	0.50	s (0.01÷0.50) step 0.01 s
	→ tPost	0.50	s (0.01÷1.50) step 0.01 s

Description of variables

- **Enab.** : Function enabling (No = Disable / Yes = Enable)
- **Trig** : Selection of the Trigger command source (start recording):
 - Start* = Trigger on time start of protection functions
 - Trip* = Trigger on trip (time delay end) of protection functions
 - OnCmd* = On Asynchronous Force trigger command
 - REUserLg* = On rising edge of "User Logic" (see § "User Trigger Oscillo")
 - FEUserLg* = On falling edge of "User Logic"
- **tPre** : Recording time before Trigger
- **tPost** : Recording time after Trigger

Operation

In the options: "Trig = Start" and "Trig = Trip", the oscillographic recording starts respectively when any protection function starts operating or trip (provided the function was programmed "Enab = Yes").

The "Oscillo" Function includes the wave Form Capture of the input quantities and can totally store a record of 3 seconds.

The number of events recorded depends on the duration of each individual recording (tPre + tPost).

In any case the number of event stored can not exceed ten (10 x 0.3 sec).

Any new event beyond the 3 sec capacity of the memory, cancels and overwrites the former records (FIFO Memory).

Setting "User Trigger Oscillo"

The "User trigger Oscillo" is a result of a logical operation (Or, AND, ecc...), it can be used like other logical output.
This operation is possible only via "MSCom2" software.

Name	User descr.	Linked functions	OpLogic	Timer	Timer type	Logical status
------	-------------	------------------	---------	-------	------------	----------------

Name

Internal name

User descr.

Fixed

Linked functions

Selection functions

OpLogic

Operation Logic = [None, OR, AND, XOR, NOR, NAND, NOT, Ff-SR]

Timer

Time delay (0-10) s, step 0.01s

Timer type

Delay = Add a delay on output activation.
The "Timer" is edge triggered on rise edge.
Monostable = Activated the output for the time "Timer"

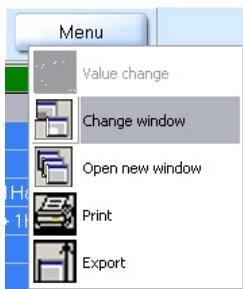

Logical status

"User Trigger Oscillo" Logical status

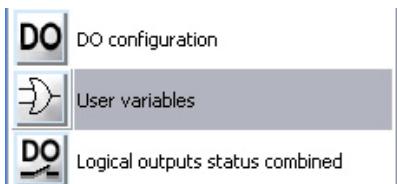

Example: Setting "User Variable"

Open "MSCom2" program and connect to the relay.

Select "Change Windows" from "Menu" button

Select "User Variable"

Setting for "User Trigger Oscillo": **51.1, 51.2, 51.3**, **"OR"**, **"1"**, **"Monostable P"**.

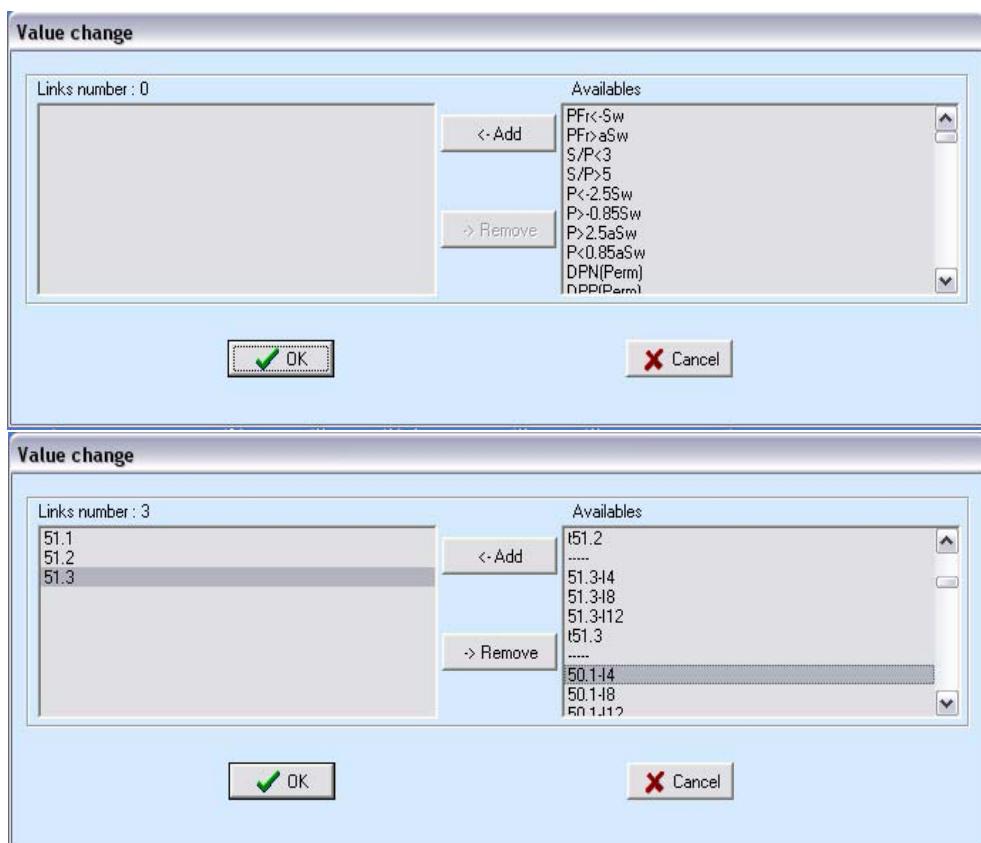

ID	Name	User descr.	Linked functions	OpLogic	Timer	Timer type	Extra	Logical status
1	UserTrigger Oscillo	UserTrigger Oscillo	51.1,51.2,51.3;	OR	0	Monostable P	0	0
2	UserVar <0>	UserVar <0>		None	0	Delay	0	0

“Linked Functions”

Select “**Linked Functions**” related to “User Trigger Oscillo” and press right button on mouse, select “Value change”:

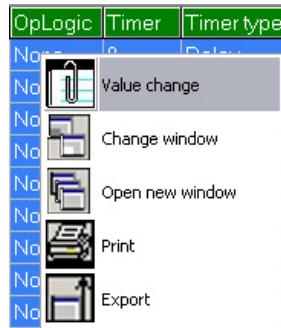

Select “**51.1, 51.2, 51.3**” from “Available” box via push-button “<Add”, and press “OK”.
 For remove functions, use push-button “>Remove”.

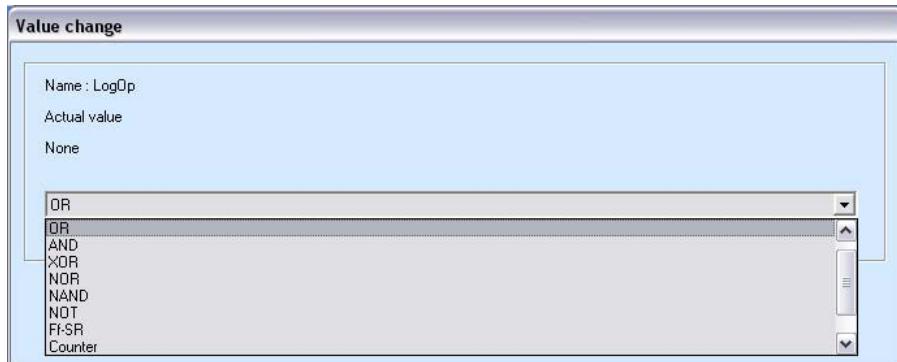

"Operation Logic" (Opologic)

Select "Open Logic" related to "User Trigger Oscillo" and press right button on mouse, select "Value change":

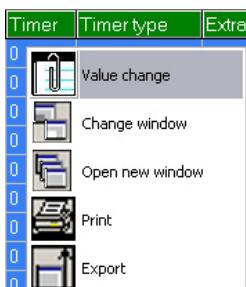

Insert "OR" into box and press "OK":

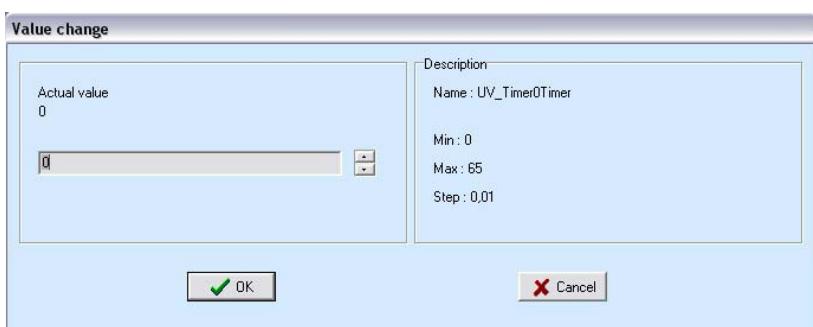

"Timer"

Select "Timer" related to "User Trigger Oscillo" and press right button on mouse, select "Value change":

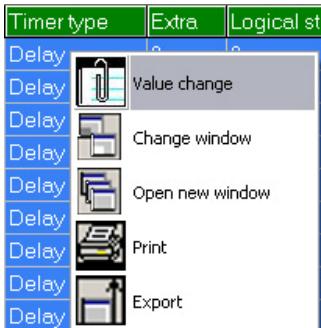

Select "1" into box and press "OK":

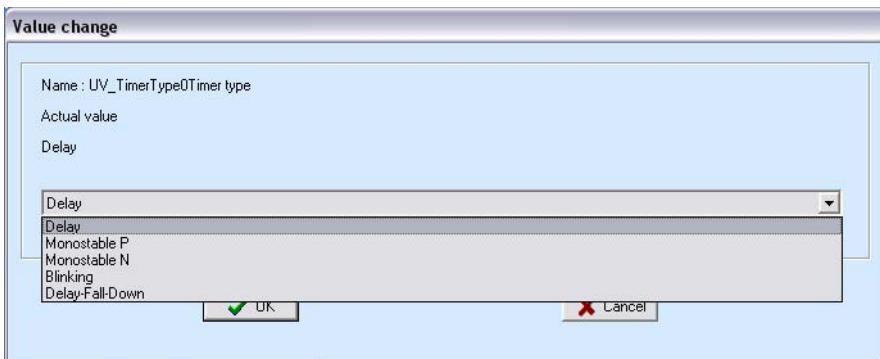

“Timer type”

Select “**Timer**” related to “User Trigger Oscillo” and press right button on mouse, select “Value change”:

Select “**Monostable**” into box and press “OK”:

Delay	=	Delay
Monostable P	=	Monostable Positive impulse
Monostable N	=	Monostable Negative impulse
Blinking	=	Flashing
Delay-Fall-Down	=	Delay fall down

Function: BrkFail (Breaker Failure)

Status	→	Enab.	No	[No / Yes]
Timers	→	tBF	0.75	s (0.05÷0.75) step 0.01 s

Description of variables

- Enab.** : Function enabling (No = Disable / Yes = Enable)
- tBF** : Trip time delay

Operation

The Breaker Failure detection is started by the operation of the output relay “R1” (programmed to be controlled by the Protection Functions that trip the C/B).

If after [tBF] seconds from operation of the relay “R1”, any input current flow is still detected (>10% In), the function “BF” trips and operate one user programmable output relay.

USER VARIABLES

The "User Variable" is a result of a logical operation (Or, AND, ecc...), it can be used like other logical output. This operation is possible only via "MSCom2" software.

ID	Name	User descr.	Linked functions	OpLogic	Timer	Timertype	Extra	Logical status

Select "**Timer**" related to "UserVar<0> (**Start Overcurrent Element**)" and press right button on mouse, select "**Value change**":

Select "**Monostable**" into box and press "**OK**":

INPUT – OUTPUT (VIA MSCOM2 SOFTWARE)

The firmware can manage up to 32 digital inputs and 20 output relays; among these, 4 digital inputs and 6 output relays are available on the relay module, the remaining are available on additional expansion modules controlled via the CAN-Bus communication channel.

Can be controlled 1 or 2 additional modules.

14DI	Module	= 14 Digital Inputs
14DO	Module	= 14 Outputs Relay
UX10-4	Module	= 10 Digital Inputs and 4 Outputs Relay

Digital Inputs

→ 0.D1	Programmable (D1)	<i>Available in the Main Relay</i>	Any digital input of the expansion modules is active when the relevant terminals (see wiring diagram) are shorted.
→ 0.D2	Programmable (D2)		
→ 0.D3	Programmable (D3)		
→ 0.D4	Programmable (D4)		
→ 1.D1	Inputs	<i>Digital input on Expansion Board</i>	
→ 1.D--	"D8", "D16" not available		
→ 1.D15			
→ 2.D1	Inputs	<i>Digital input on Expansion Board</i>	
→ 2.D--	"D8", "D16" not available		
→ 2.D15			

Four Digital Input are available on main relay:

<input type="checkbox"/>	D1 (0.D1)	(terminals 38 - 28)	:	Programmable
<input type="checkbox"/>	D2 (0.D2)	(terminals 38 - 18)	:	Programmable
<input type="checkbox"/>	D3 (0.D3)	(terminals 38 - 29)	:	Programmable
<input type="checkbox"/>	D4 (0.D4)	(terminals 38 - 19)	:	Programmable (PTC)

Three of them (0.D1, 0.D2, 0.D3) are deactivated, when the relevant terminals are open and get activated when the relevant terminals are shorted by an external cold contact.

The operation of the Input "**0.D4**" is dependent on the value "**R**" of resistance of the external circuit connected to its terminals (38-19):

- Activated if " $R < 50\Omega$ " or " $R > 3000\Omega$ ". - Deactivated if " $50\Omega \leq R \leq 3000\Omega$ ".

Therefore, if the terminals "38-19" are open-circuited, the input "**0.D4**" is activated; for using "**0.D4**" as a normal Digital Input simply controlled by an external cold contact, it is necessary to permanently connect across the terminal's "38-19" (in parallel to the external contact) a load resistor of value between 50 and 3000Ω (example 1000Ω - 0.5W).

The additional inputs "**1.D1....1.D15**" are available when the first expansion module is present.

The additional inputs "**2.D1....2.D15**" are available when the second expansion module is present.

Any digital input of the expansion modules is active when the relevant terminals (see wiring diagram) are shorted.

"DI" Configuration (via MSCom2 software)

Any of the Digital Inputs can be programmed to control one or more of the following functions.

Group 1-2	Blocking input	Selection of the setting Group 1 or 2.
ExtR	Blocking input	External Reset input
Local State	Blocking input	Local state
Remote State	Blocking input	Remote state
C/B open command	Blocking input	Open C/B Command
C/B close command	Blocking input	Close C/B Command
Circuit Breaker	Blocking input	Status Circuit Breaker
EIPO	Blocking input	Protection (detection module) Inhibition
EITO	Blocking input	AVT timer Inhibition
Bi51.1	Blocking input	<i>First</i> overcurrent element
Bi51.2	Blocking input	<i>Second</i> overcurrent element
Bi51.3	Blocking input	<i>Third</i> overcurrent element
Bi50.1	Blocking input	<i>First</i> short circuit overcurrent element
Bi50.2	Blocking input	<i>Second</i> short circuit overcurrent element
Bi50.3	Blocking input	<i>Third</i> short circuit overcurrent element
Bi51N.1	Blocking input	<i>First</i> time delay earth fault element
Bi51N.2	Blocking input	<i>Second</i> time delay earth fault element
Bi51N.3	Blocking input	<i>Third</i> time delay earth fault element
Bi50N.1	Blocking input	<i>First</i> instantaneous earth fault element
Bi50N.2	Blocking input	<i>Second</i> instantaneous earth fault element
Bi50N.3	Blocking input	<i>Third</i> instantaneous earth fault element

Example:

Example configuration

ID	Relay	Linked functions	OpLogic	Logical status	Output config	Function	tON	Relay status
1	0.R1 [Master board, R:1]		None	Off	Normally Deenergized	Pulse	0.01	Off
2	0.R2 [Master board, R:2]		None	Off	Normally Deenergized	Pulse	0.01	Off

Relay

Relay internal name

Linked function

It's available only 1 link, select the function for tripping the output relay (for multiple association use "User Variable")

Operation Logic

Not Used

Logical Status

Relay Logical status

Output Configuration

Normally Deenergized

The output relay is deenergized in normal conditions and gets energized on activation of the controlling Functional Output; reset means deenergizing.

Normally Energized

The output relay is energized in normal conditions and gets deenergized on activation of the controlling Functional Output; reset means energizing.

tON (Operation Time)

This timer controls the duration of the activation of the output relay.

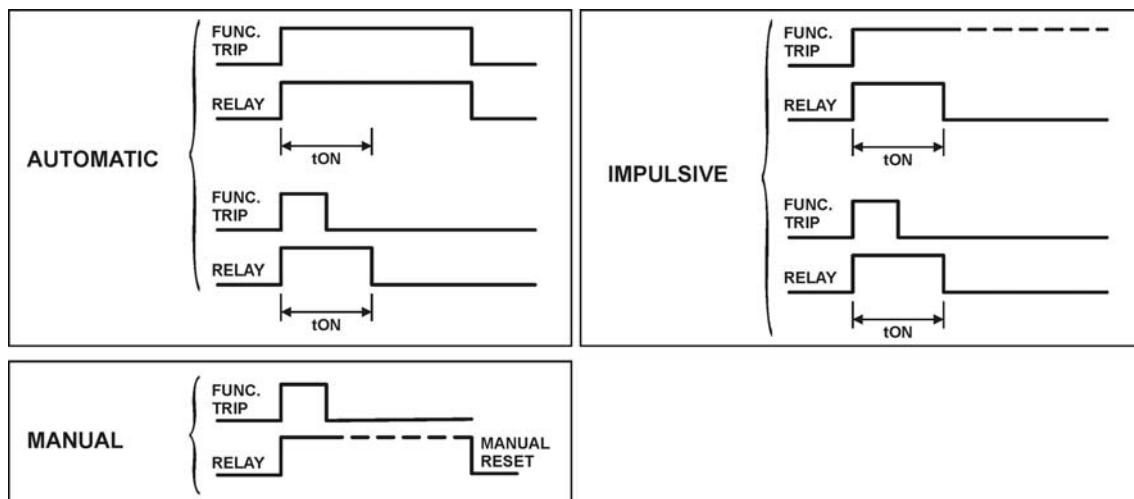

tON : (0.01-10)s, step 0.01s

Relay Status

Relay – Physical status

Functions - Operation Mode

- Automatic** : In this mode the output relay is "operated" (energized if "N.D.", deenergized if "N.E.") when the controlling Functional Output is activated and it is reset to the "non operated" condition when the Functional Output gets deactivated but, anyhow, not before the time "tON" has elapsed (minimum duration of the operation time)
- Manual** : In this mode the output relay is "operated" when the controlling Functional Output is activated and remains in the operated condition until a manual reset command is issued by the relay keyboard (local commands menu) or via the serial communication. In this mode the timer "tON" has no effect.
- Impulsive** : In this mode the output relay is "operated" when the controlling Functional Output is activated and it remains in the "operated" condition (energized if "N.D.", deenergized if "N.E.") for the set time "tON" independently from the status of the controlling Functional Output.

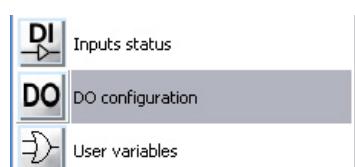

Open "MSCom2" program and connect to the relay.

Select "Change Windows" from "Menu" button

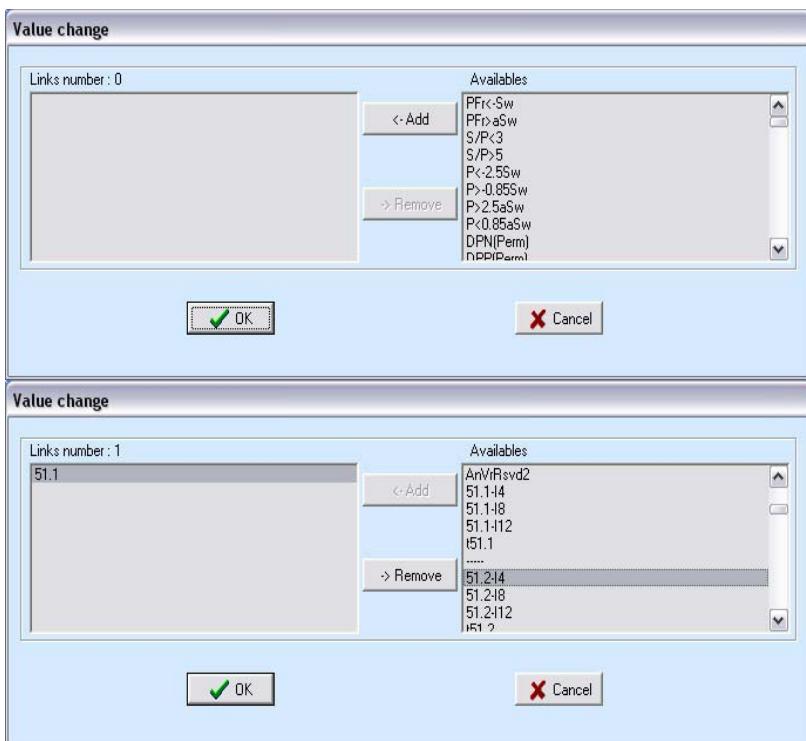

Select "DO Configuration"

Example: Change settings for "0.R1"Change settings for "**0.R1**" : "51.1", "Normally Energized", "Automatic reset", "0.5".

ID	Relay	Linked functions	OpLogic	Logical status	Output config	Function	tON	Relay status
1	0.R1 [Master board, R:1]	51.1,	None	Off	Normally Energized	Automatic reset	0.5	Off
2	0.R2 [Master board, R:2]		None	Off	Normally Denergized	Pulse	0.01	Off

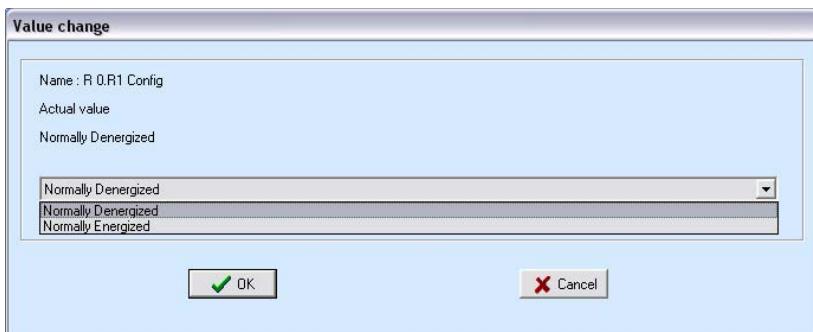

"Linked Functions"Select "**Linked Functions**" related to "**0.R1**" and press right button on mouse, select "**Value change**":From box "Available", select "**51.1**" and press "**Add**".Press "**OK**" for confirmation. (if Password is request, see § Password)

“Output Config”

Select “**Output Config**” related to “**0.R1**” and press right button on mouse, select “**Value change**”:

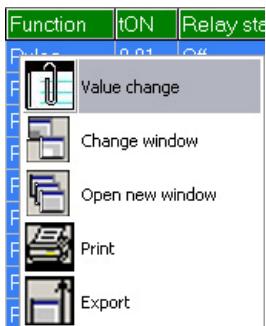

Select “**Normally Energized**” from combo box and press “**OK**”
(if Password is request, see § Password)

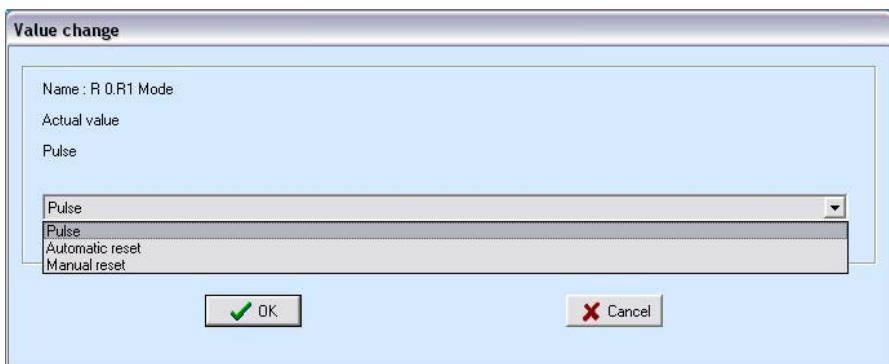

“Function”

Select “**Function**” related to “**0.R1**” and press right button on mouse, select “**Value change**”:

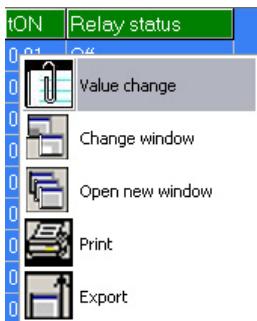

Select “**Manual reset**” from combo box and press “**OK**”

(if Password is request, see § Password):

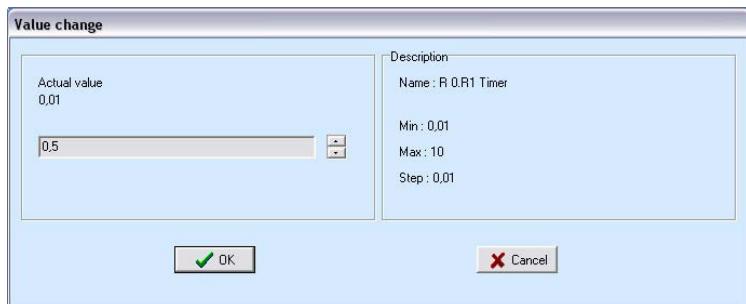

"tON"

Select "tON" related to "0.R1" and press right button on mouse, select "Value change":

Set "0.5" and press "OK" (if Password is request, see § Password):

DATE & TIME

In this menu it is possible to configurate the Date and Time

Date:	20YY	/	MM	/	DD	(2000/01/01 ÷ 2099/12/31)
Time:	HH	:	MM	:	00	YY = Year / MM = Month / DD = Day
DofW:	Day					HH = hour / MM = Minutes / 00

Es: Wednesday

- 1  • Press “**Menu**” for access to the main menu with icons.
- 2  • Select icon “**TimeDate**” by pushbuttons “**Increase**” or “**Decrease**”.
• Press “**Select**”.
- 3  • Press “**Modify**”.
- 4  • The last two figures of the Year will appear in bold character; by pushbuttons “**Increase**” or “**Decrease**” set the new figures.
• Press “**Next**” to go to the next setting.
- 5  • As above for changing the “Month”
• Press “**Next**” to go to the next setting.
- 6  • As above for changing the “Day”
• Press “**Next**” to go to the next setting.
- 7  • As above for changing the “Hours”
• Press “**Next**” to go to the next setting.
- 8  • As above for changing the “Minutes”
• Press “**Next**” to go to the next setting.

- The **Day of the Week** is calculated and displayed automatically.
- Press "**Exit**" to go back to the main menu.
- Press "**Modify**" to go back to the step "3"

Press the button "**Next**" to go back to the previous display.

Clock synchronization

The internal clock has 1ms resolution and a stability of $\pm 35\text{ppm}$ in the operational temperature range.

It can be synchronized with an external time reference in the following ways:

- Using the standard "**Time Synchronization**" procedure of the "**IEC870-5-103**" protocol.
- Using the "**MSCom 2**" software or from the DCS with the Modbus RTU protocol.

Note: On power supply failure an internal battery supports the internal clock for over two years.

HEALTHY (DIAGNOSTIC INFORMATION)

The relay operates a continuous checking of the vital functionalities and in case an internal failure is detected, the I.R.F. function (see § I.R.F.) is activated and the Power/IRF led is set to flashing.

Device	→	No Fail	→	No Fail
		Fail	→	Fail present
		MinorFail	→	Minor Fail
		HistoricalFail	→	Cleared Fail
		FW not comp.	→	Firmware not compatible

If an internal self-clearing (transient) fault is detected, it is recorded into an historical file without any other action.

INFO (RELAY VERSION)

In this menu it is possible to read the information relevant to relay unit.

SW Version	AcqUnit-I/O	→ #####.##.##.##	Firmware version of acquisition unit
	ProtectUnit	→ #####.##.##.##	Firmware version of CPU unit
Protect.Model		→ FeederManager	Protection Type
Serial Number		→ #####/##/##/##/##	Relay Serial Number
User Tag		→ UMWR	Relay identification label.
Build		→ #####/#####/##	Build identification label.
Line		→ #####/#####/##	Line identification label. This information can only be modified by the interface program "MSCom 2" and allows the user to give to the relay any suitable denomination.

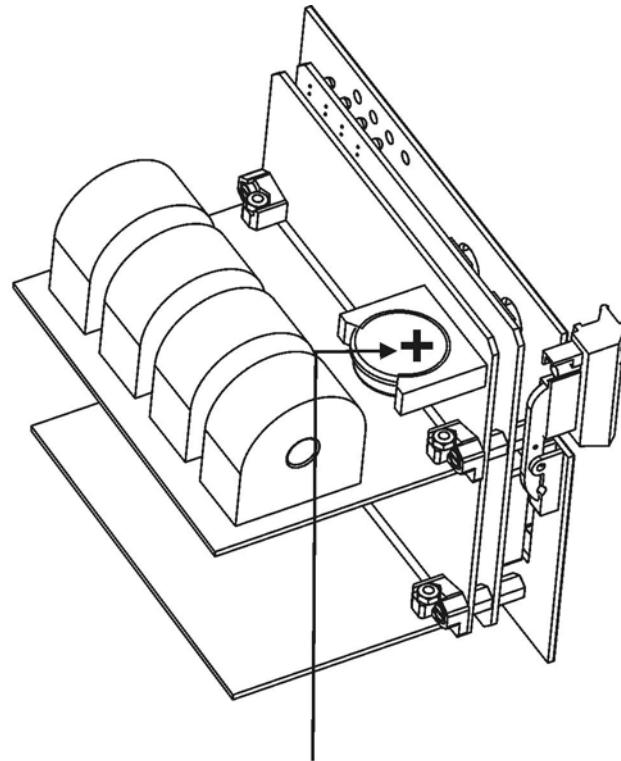

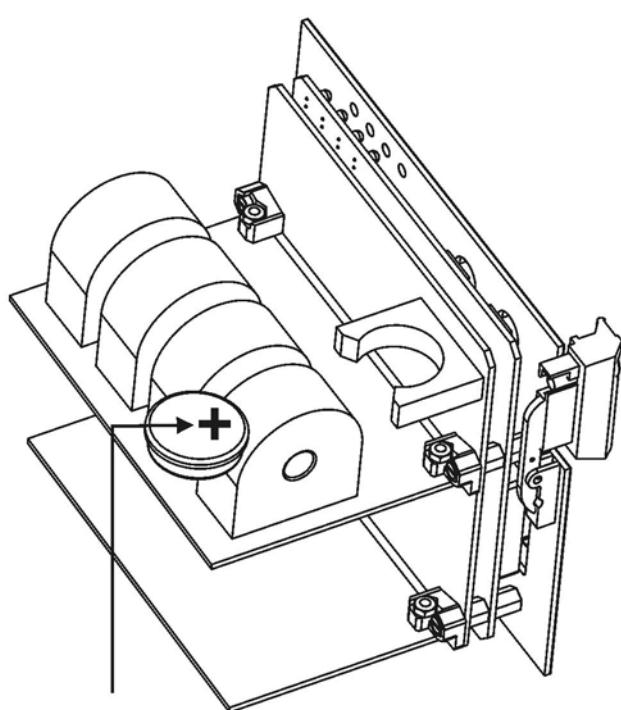

BATTERY

The relay is equipped with a lithium battery type "CR2477N 3V", to support the internal clock and the oscillographic recording memory in case of programmed lack of power.

The expected minimum duration without power exceed 2 years.

Attention!! Use only battery specified.

Instruction for replacement the battery:

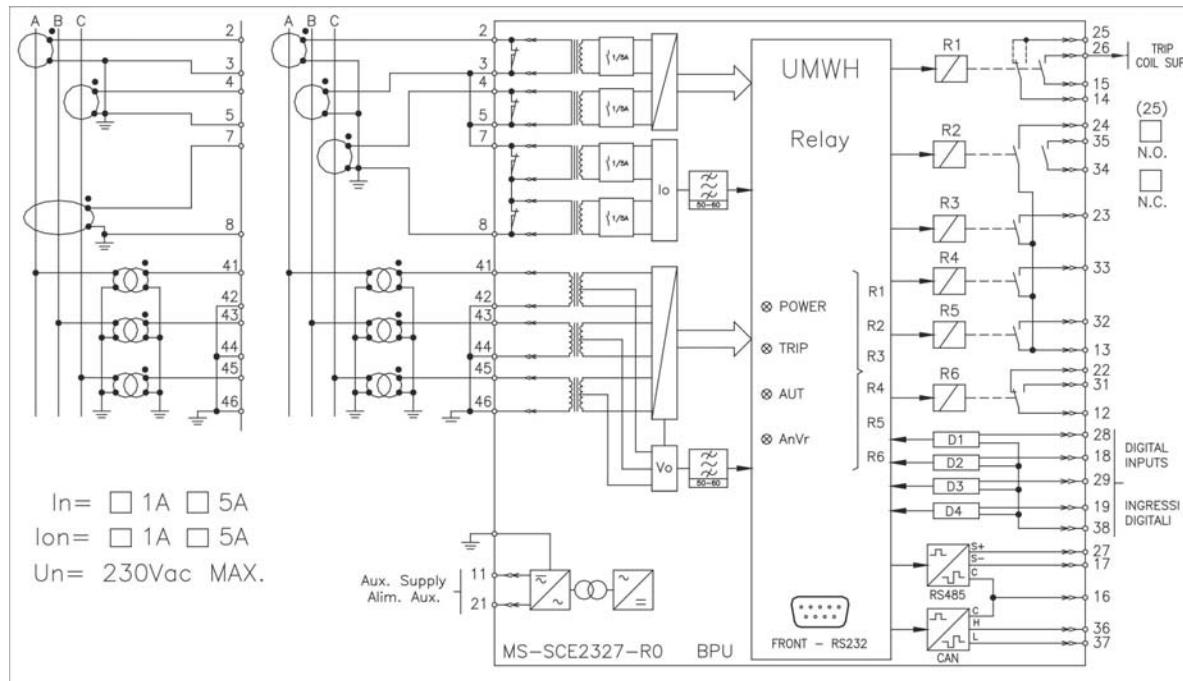

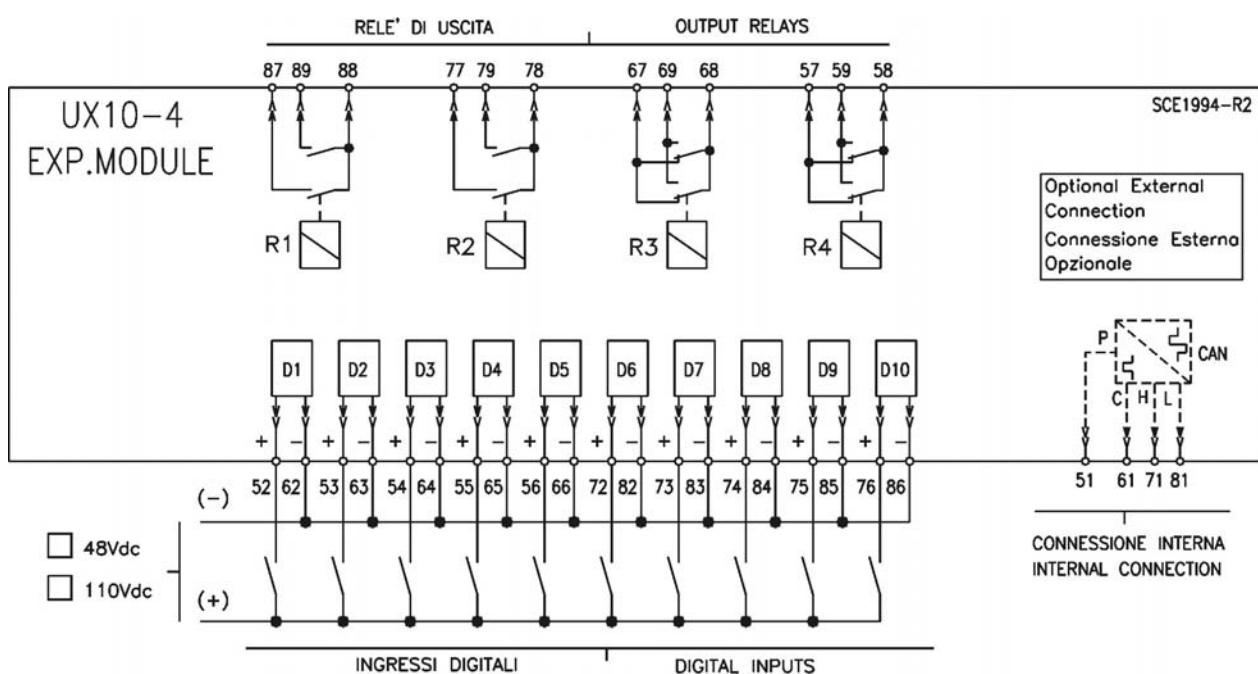

**BATTERY****BATTERY****MAINTENANCE**

No maintenance is required. In case of malfunctioning please contact Microelettrica Scientifica Service or the local Authorized Dealer mentioning the relay's Serial No reported in the label on relays enclosure.

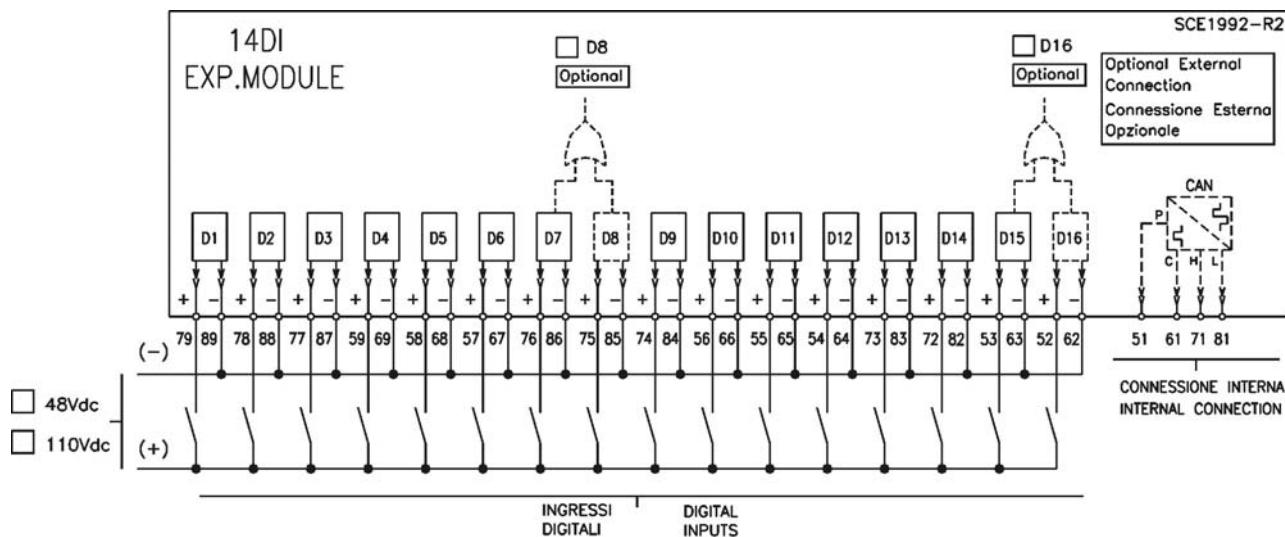

POWER FREQUENCY INSULATION TEST

Every relay individually undergoes a factory insulation test according to IEC255-5 standard at 2 kV, 50 Hz 1min. Insulation test should not be repeated as it unusefully stresses the dielectrics.

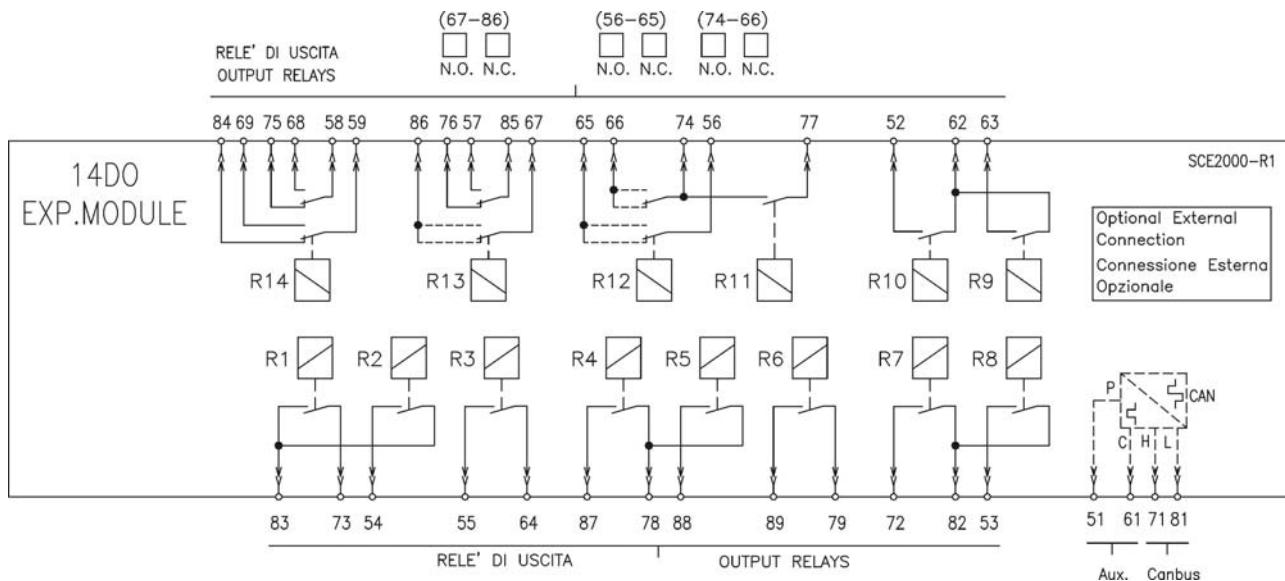

When doing the insulation test, the terminals relevant to serial output, digital inputs and RTD input must always be short circuited to ground. When relays are mounted in switchboards or relay boards that have to undergo the insulation tests, the relay should be isolated. This is extremely important as discharges eventually taking place in other parts or components of the board can severely damage the relays or cause damages not immediately evident to the electronic components.

14DO-S - Expansion Module - Wiring Diagram (14 Output Relays)

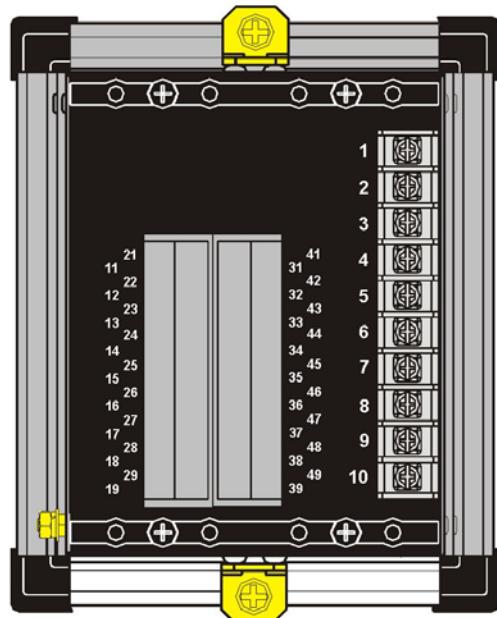

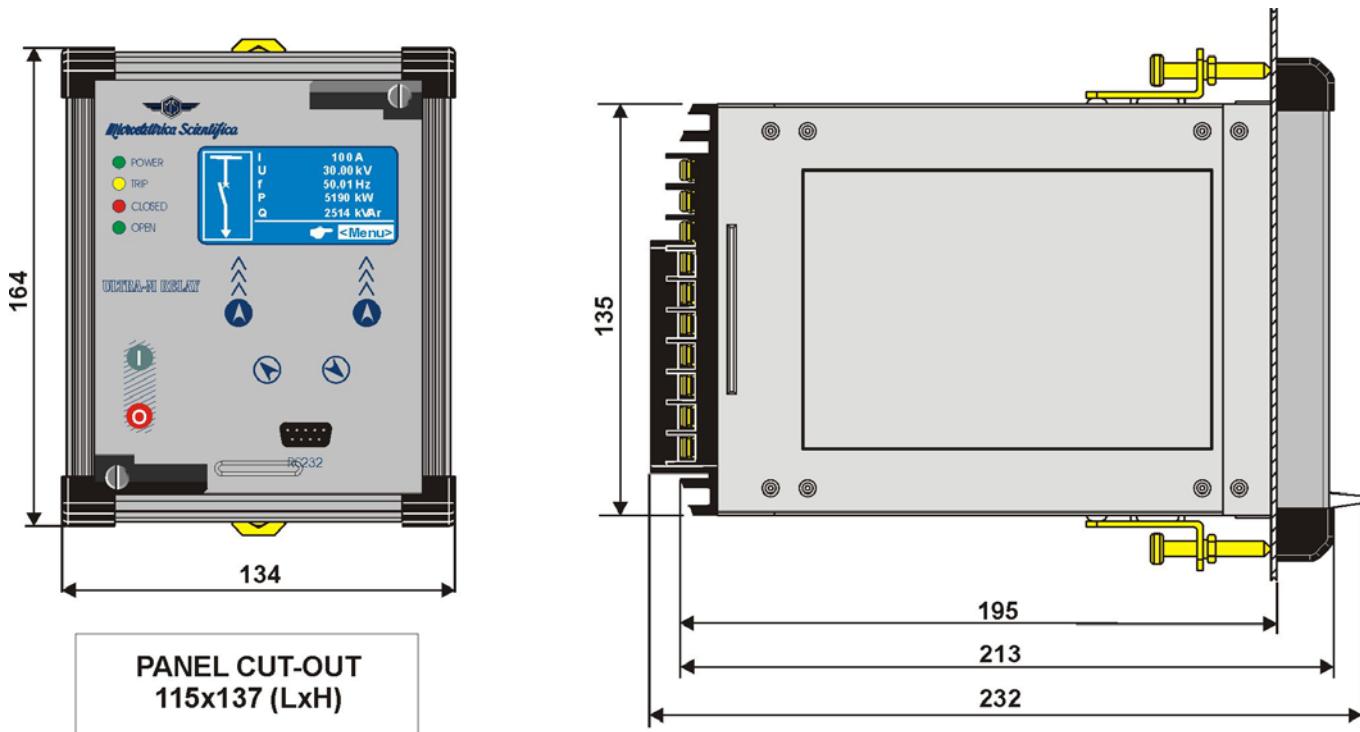

WIRING THE SERIAL COMMUNICATION BUS**CONNECTION TO RS485****FIBER OPTIC CONNECTION**

Each relay is identified by its programmable address code (NodeAd) and can be called from the P.C.
A dedicated communication software (MSCom2) for Windows 9x/2000/XP (or later) is available.

Please refer to the MSCom2 instruction manual for more information.

Maximum length of the serial bus can be up to 200m. For longer distance and for connection of up to 250 Relays, optical interconnection is recommended (please ask Microelettrica for accessories).

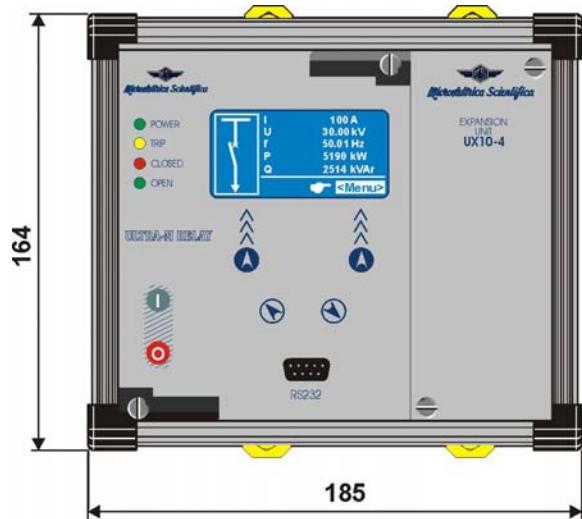

BASIC RELAY - OVERALL DIMENSIONS

TERMINAL CONNECTION

Flush mounting protection degree: IP44 (IP54 on request)

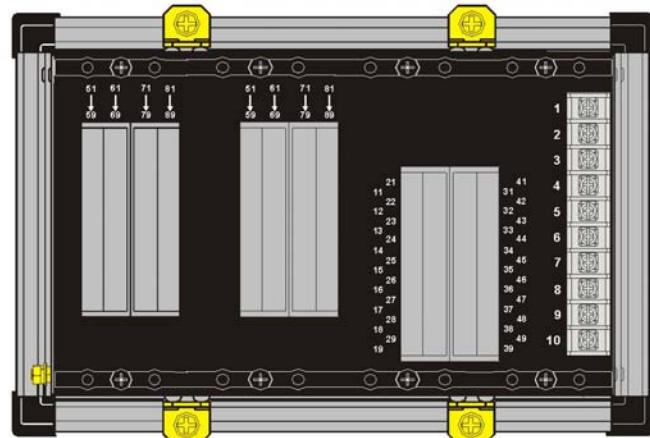

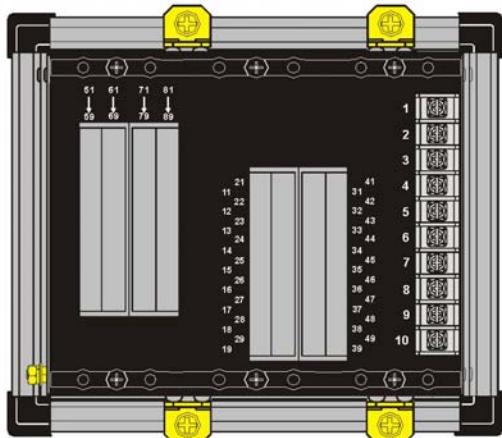

(1 Expansion Module) & (2 Expansion Module) - Overall Dimensions

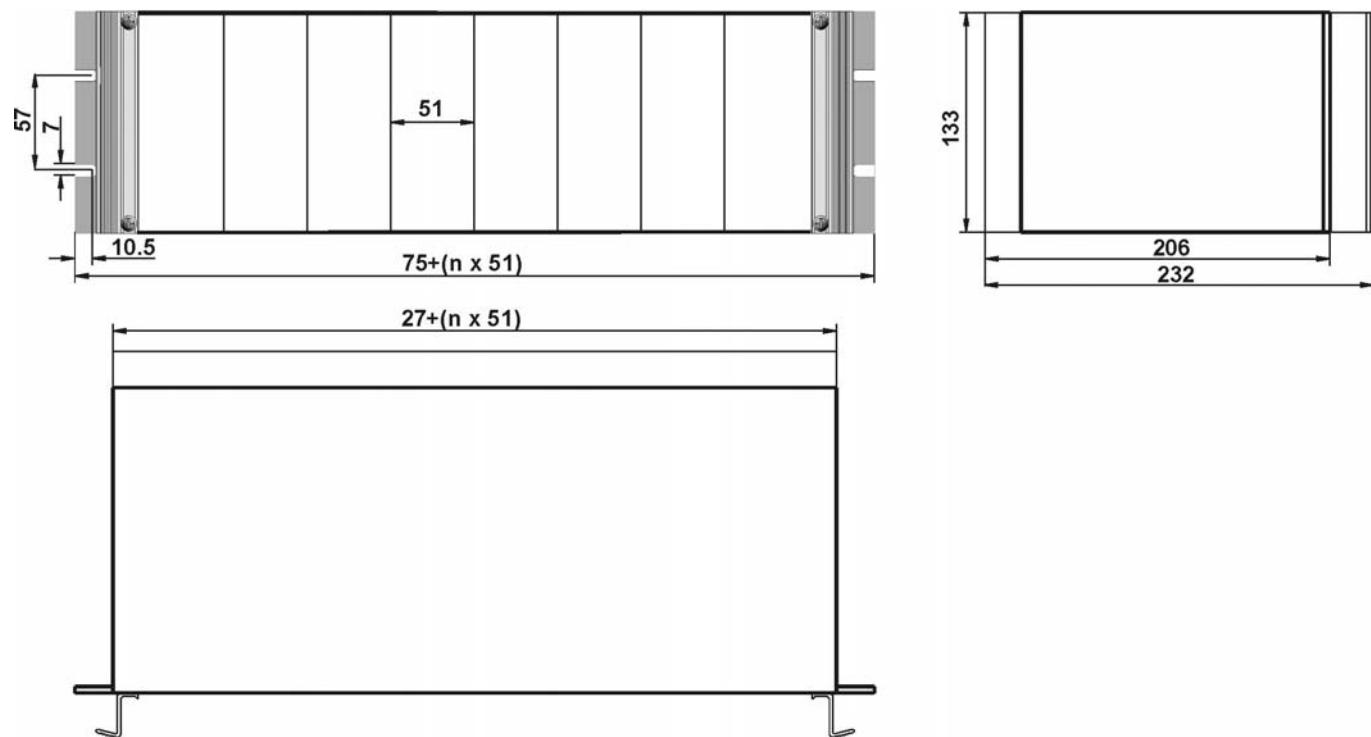

PANEL CUT-OUT
165x137 (LxH)

PANEL CUT-OUT
217x137 (LxH)

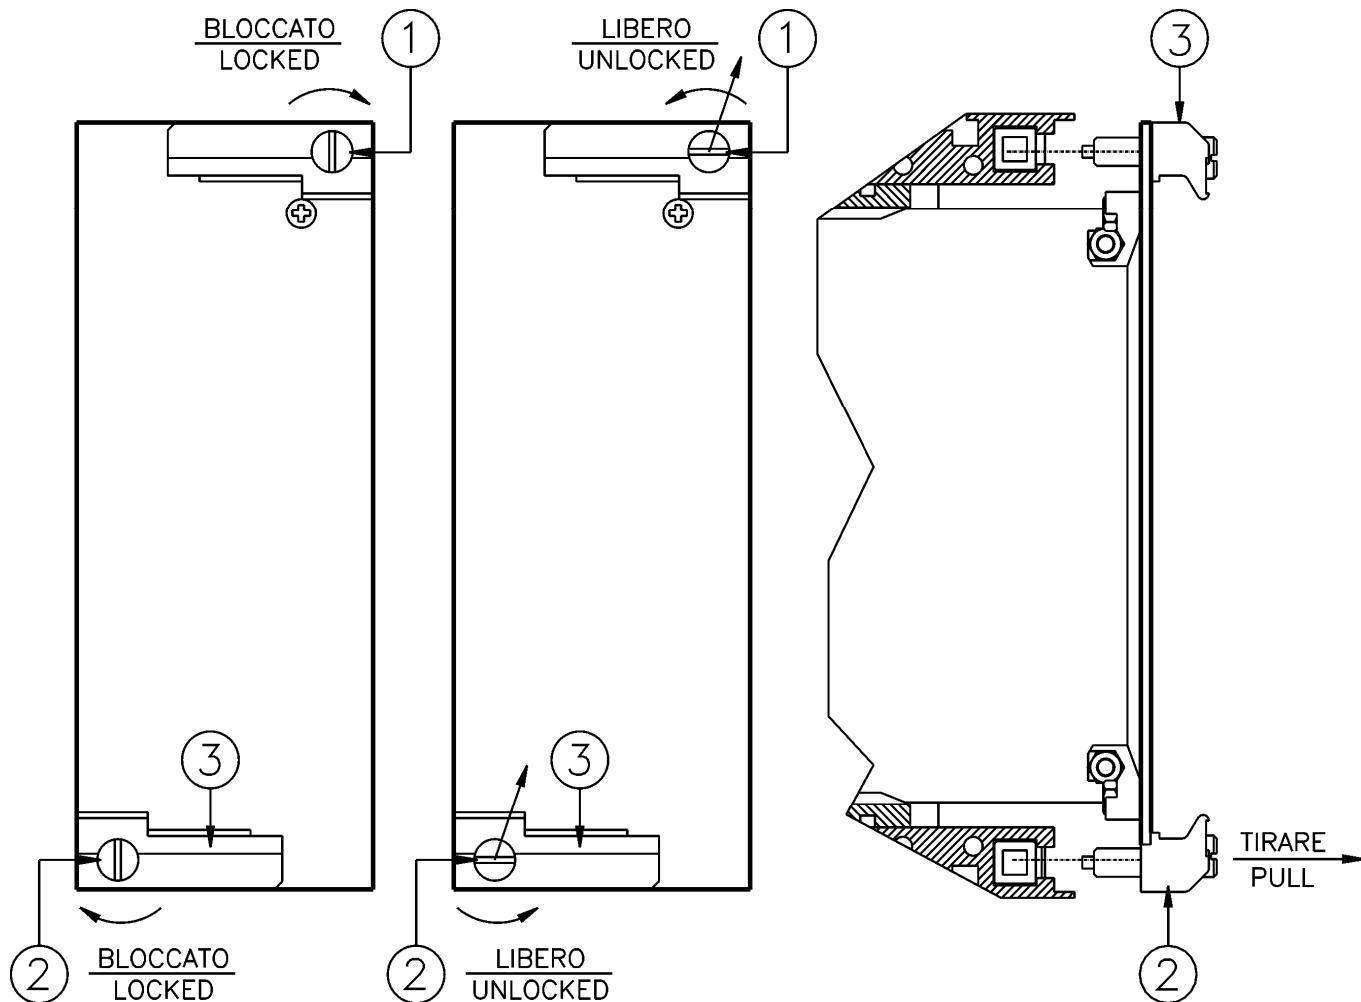

Rack 3U – Overall Dimensions

DIRECTION FOR PCB'S DRAW-OUT AND PLUG-IN**Draw-out**

Rotate clockwise the screws ① and ② in the horizontal position of the screw-driver mark.
Draw-out the PCB by pulling on the handles ③

Plug-in

Rotate clockwise the screws ① and ② in the horizontal position of the screw-driver mark.
Slide-in the card on the rails provided inside the enclosure.
Plug-in the card completely and press the handle to the closed position.
Rotate anticlockwise the screws ① and ② with the mark in the vertical position (locked).

ELECTRICAL CHARACTERISTICS

**APPROVAL: CE
REFERENCE STANDARDS**

IEC 60255 - CE Directive - EN/IEC61000 - IEEE C37

<input type="checkbox"/> Dielectric test voltage	IEC 60255-5	2kV, 50/60Hz, 1 min.
<input type="checkbox"/> Impulse test voltage	IEC 60255-5	5kV (c.m.), 2kV (d.m.) – 1,2/50µs
<input type="checkbox"/> Insulation resistance	> 100MΩ	

Environmental Std. Ref. (IEC 60068)

<input type="checkbox"/> Operation ambient temperature	-10°C / +55°C
<input type="checkbox"/> Storage temperature	-25°C / +70°C
<input type="checkbox"/> Environmental testing (Cold)	IEC60068-2-1
<input type="checkbox"/> (Dry heat)	IEC60068-2-2
<input type="checkbox"/> (Change of temperature)	IEC60068-2-14
<input type="checkbox"/> (Damp heat, steady state)	IEC60068-2-78
	RH 93% Without Condensing AT 40°C

CE EMC Compatibility (EN61000-6-2 - EN61000-6-4 - EN50263)

<input type="checkbox"/> Electromagnetic emission	EN55011	industrial environment		
<input type="checkbox"/> Radiated electromagnetic field immunity test	IEC61000-4-3 ENV50204	level 3 900MHz/200Hz	80-2000MHz 10V/m	10V/m
<input type="checkbox"/> Conducted disturbances immunity test	IEC61000-4-6	level 3	0.15-80MHz	10V
<input type="checkbox"/> Electrostatic discharge test	IEC61000-4-2	level 3	6kV contact / 8kV air	
<input type="checkbox"/> Power frequency magnetic test	IEC61000-4-8		1000A/m	50/60Hz
<input type="checkbox"/> Pulse magnetic field	IEC61000-4-9		1000A/m, 8/20µs	
<input type="checkbox"/> Damped oscillatory magnetic field	IEC61000-4-10		100A/m, 0.1-1MHz	
<input type="checkbox"/> Immunity to conducted common mode disturbance 0Hz-150KHz	IEC61000-4-16	level 4		
<input type="checkbox"/> Electrical fast transient/burst	IEC61000-4-4	level 3	2kV, 5kHz	
<input type="checkbox"/> HF disturbance test with damped oscillatory wave (1MHz burst test)	IEC60255-22-1	class 3	400pps, 2,5kV (m.c.), 1kV (d.m.)	
<input type="checkbox"/> Oscillatory waves (Ring waves)	IEC61000-4-12	level 4	4kV(c.m.), 2kV(d.m.)
